## 2 – Host registration

When you are logged into the system, following this steps for insert your host:

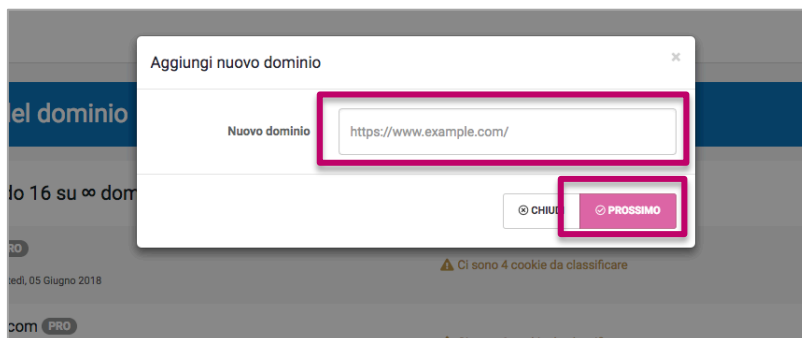

1. Go to “Domini” section

2. Click on “Aggiungi nuovo dominio” button:

3. Insert your hostname and click on “Prossimo” button

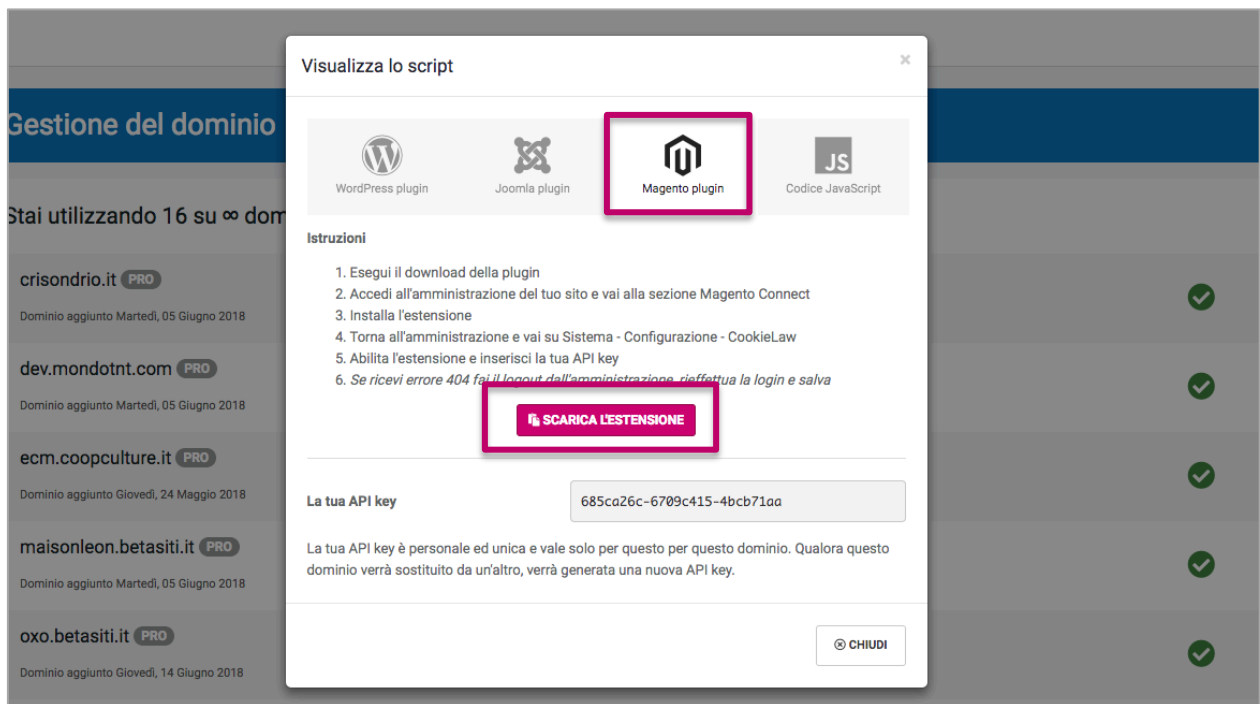

### 3 – Download plugin for Magento

1. Click on `</>` icon next on your Magento host

2. Select **Magento plugin's** tab and then click on **“Scarica estensione”** button.

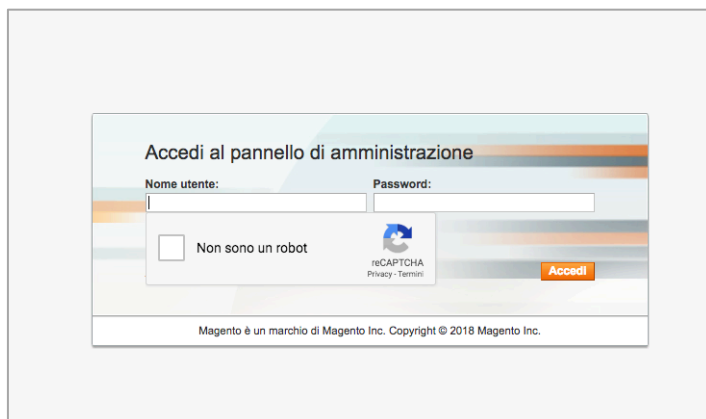

3. Copy your **API key**

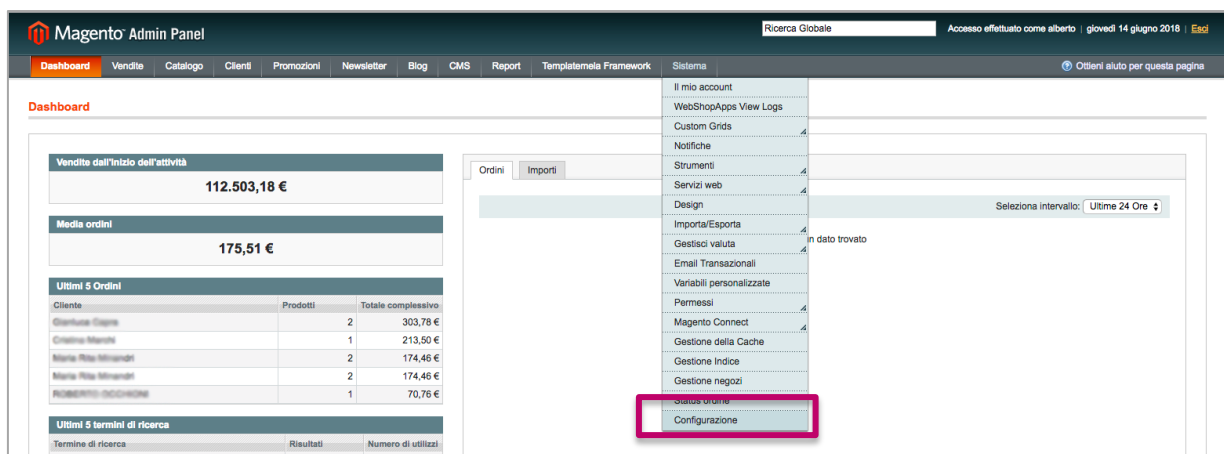

## 4 – Plugin installation

This plugin requires Magento's version between 1.5.x and 1.9.x  
*It is possible watching the wizard on your dashboard.*

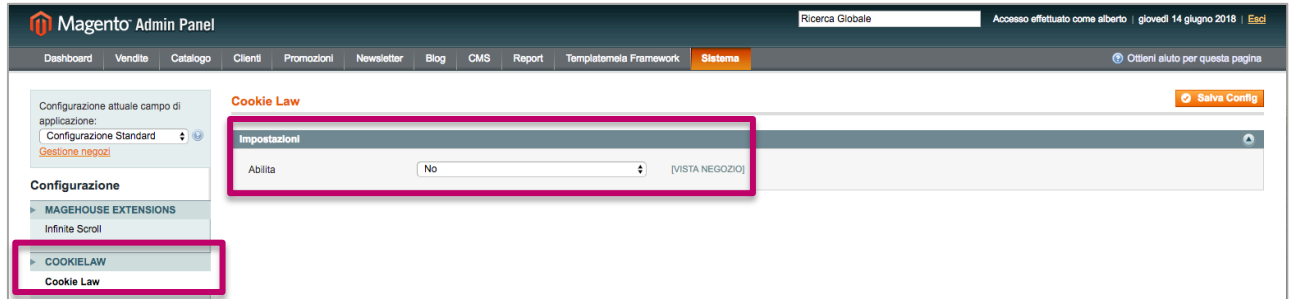

1. Unzip the .tgz archive and upload the app's directory on the server (by File Manager, Filezilla or other) into main directory of your Magento.  
Another way is launch the installation process by Magento connect when you can upload the archive and the installation process start automatically.
2. After the installation process, go to your Magento site administration and login

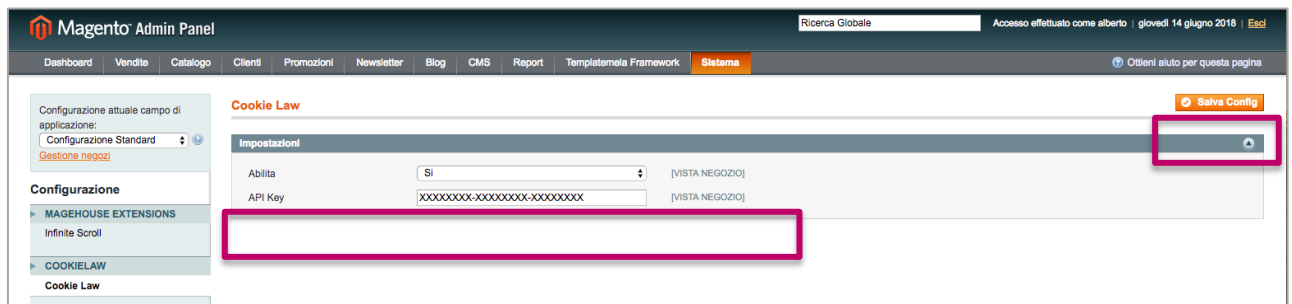

### 3. Go to System – Configuration

4. Go to **CookieLaw** section and enable the plugin

5. Insert your API Key into the field.

6. *If after saving on your screen appears 404 error, you must logout from your administration and then you need to re-login. Now if you go back on configuration and then you save, the error message will no longer appear*
